NEW PRODUCT:

Commercial Thermostatic Mixing Valve

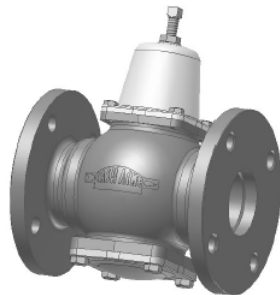

This particular series of mixers has been designed especially for systems which demand high flow rates. This valve also features high accuracy and stability of temperature regulation. This valve is for commercial use and has therefore not been put through Australian Standards.

Sizes available: 25 - 50mm
Adjustable temp range: 30 - 65°C

Commercial Pressure Reducing Valve

The commercial PRV is a high flow pressure regulating valve, designed for commercial and industrial applications. The valve has flanged connections from 50mm—100mm and several spring options to allow for a large range of pressure settings.

- Factory set at 500kPa
- Max inlet pressure is 2000kPa
- Spring Options are:
 - 100—500kPa,
 - 350—750kPa (standard)
 - 550-875kPa

JOKE OF THE MONTH

A man and wife go on a romantic weekend to a hotel. Their double room reservation has been messed up and instead they are given an attic room with 2 single beds and there is a raised beam on the floor between the beds which they have to step over to avoid stubbing their toes. When they go to bed the husband switches the light off and says to his wife "how about a bit of nookie then?" she agrees and makes her way across the room in the dark and painfully stubs her toe on the raised beam. Her husband hears her shout in pain and comforts her by saying "oh diddums did you stub your little tootsie-wootsie, come and lie in my bed and let me rub it better for you" She lies next to him in bed and they spend the next hour making wonderful love. The wife then gets out of bed and starts to cross the room to return to her bed and stubs her toe on the raised beam again. On hearing her shout with pain again her husband says " Can't you pick your bloody feet up."!!!

30/205 Port Hacking Rd
